Automated Screening Kiosk - ASK

ITC Systems' "Automated Screening Kiosk" - ASK, provides fast, efficient COVID screening.

What is ASK?

As schools work to manage the safe return of in-person activities, they are experiencing the burden of collecting a significant amount of new data and validating users daily. **ASK**, ITC's new "Automated Screening Kiosk", has been designed to greet people as they enter your building and provide quick and secure validation of their COVID status.

By using the campus' existing credentialing system, **ASK** can efficiently interface with systems on campus to confirm vaccination status, completion of a daily COVID questionnaire, business on campus within a specified timeframe, and that the user is active in the system.
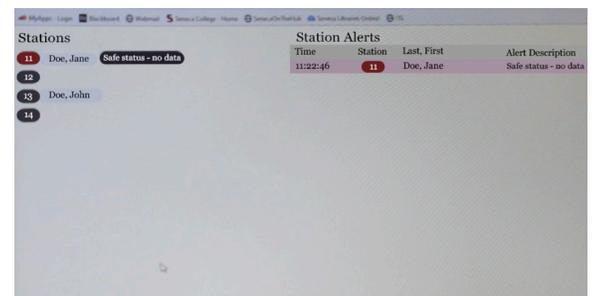

ASK supports NFC (i.e., mobile, card, wearable), barcode, and mag swipe cards.

How does it work?

All people entering a building are greeted by **ASK**. Within seconds of the user presenting their credential, **ASK** verifies their status using data stored in your Campus OneCard, SIS or ERP system, as well as any applicable daily COVID screening questionnaire. If the user meets all established requirements, they are given approval to enter the facility, and if not, the user will be directed to see security.

With the option to add WiFi or cellular capabilities, the kiosk can be moved seamlessly around campus.

When combined with the companion **ASK** Security Monitor, campus security personnel can observe many **ASK** stations in real-time from one screen. This allows for a reduction in resources required to manage access points and will provide personnel with immediate feedback related to failed verifications.

ITC Systems' ASK

What else can it do?

In addition to meeting the needs required for complex COVID screening, **ASK** can also be used for attendance tracking, meal plan verification and ticketing at special events. It is capable of quickly verifying a large number of entrants against any data-based requirement with minimal staff overseeing the process.

ASK is an efficient way for office towers to validate tenants upon entering the building, allowing one security desk to monitor many entrances.

What does it come with?

ASK is highly customizable. The base unit ships with a barcode reader and touch screen, and is powered by Power over Ethernet "PoE".

Options include:

- External PoE injector (power supply),
- Stand,
- Wifi, and
- Cellular data connection.

Where can I use ASK?

While **ASK** has been designed for higher education, it can be used by all customers using our netZcore and Avro OneCard platforms, and can integrate with other OneCard systems as well.

ITC has 30 years of experience integrating to other platforms. If we don't already support it... we can easily integrate your requirements.

How do I get ASK?
