Mini Transaction Till

ITC Systems' 1535 Mini Transaction till is the perfect pay control station solution for over-the-counter cash card transactions.

Functionality

The 1535 has the ability to add to and subtract from cards both in cash and unit value. It can format blank cards with up to 3 site codes and a zero / other preset value.

The Mini Transaction Till is operator run and has the added feature of being able to 'log in' and 'log out' operators for security purposes. Only those with valid operator cards can use the Till. The necessary audit controls are in place such as metering by operator for total value added or subtracted and a grand total meter. These results can be printed out or downloaded to a computer. Round out the card system with a Mini Till, perfect for small systems or for back room use. It is designed for ease of use and low maintenance.

ITC Systems' stored value MAF format cards can encode cards using PIN. These serialized cards have a security algorithm, issuer code, account number, expiration date, transaction number, regional number, and date and time. These cards can also have 2 purses with a limit on each purse, either with a declining balance or credit balance.

Specifications

1535

LCD	Backlit 2 x 16 Display
