

A secure, cashless vending solution that provides streamlined cash flow while offering patrons convenience and simplicity.

Functionality

ITC Systems' Vending Terminals offer the ultimate in cashless vending. Each reader fits into the standard bill validator cut-out found in most MDB vending machines. The models 1520 and 7020 can be installed in conjunction with the existing coin and bill acceptors or can operate independently.

The Vending Terminals enable the use of a vending machine through an encoded magnetic stripe card, contactless card or bar coded card. The value of the purchase is deducted from the account the card is linked to and the product is dispensed.

Model 1520

The model 1520 is a stored value magnetic stripe card reader that reduces the amount of the purchase from value on the card. It stores extensive transaction details and information that can be downloaded for reconciliation later.

Mag Card Stored Value
Model 1520

Model 7820

The model 7020 utilizes ITC Systems' netZcom technology to debit a patron's pre-allocated online account using TCP/IP protocol. The netZcom series uses an ABA magnetic stripe card that can also be a credit card or other card media.

netZcom Online Terminal
Model 7020

Benefits

- Increase volume and revenue
- Accepts many card types -- magnetic stripe, contactless, barcode
- Reduces or eliminates vandalism
- Replaces coins

Applications

- Food and drink machines
- Any MDB vending machine
- Specialty Vending
